

AI-Supported Teaching Methods: Strategies Enhanced by AI and Their Classroom Impact

This overview presents key teaching strategies powered by artificial intelligence (AI), along with their practical impact in the classroom. These approaches align with emerging practices in digital education and can support inclusive, adaptive, and effective teaching.

Personalized and Differentiated Learning

AI-powered platforms adjust content and difficulty levels in real time based on students' progress, mistakes, and learning pace.

- Adaptive Learning: AI adjusts content and difficulty in real time based on each student's progress and pace.
- Instant Feedback: AI provides real-time insights, corrects errors, and guides improvement.
- Smart Recommendations: Suggests personalized exercises and resources to support individual growth

Automated Creation of Interactive Resources

Transform Static Materials

AI can instantly transform static materials (texts, PDFs, videos) into interactive formats

Interactive Formats

Self-correcting quizzes, flashcards, glossaries, or mind maps using tools like NolejAI or QuizWizard

Learning Benefits

This boosts engagement and supports independent practice and long-term retention

Student Autonomy and Personalized Support

Generative AI tools (e.g., ChatGPT) act as learning assistants outside classroom time by:

Explaining difficult concepts

Designing personalized study plans

Creating adaptive self-assessments

Supporting idea synthesis or rewording

This fosters student autonomy, confidence, and skill development beyond classroom boundaries.

Greater Accessibility and Inclusion

Text-to-Speech

Converting written content to audio for students with visual impairments or reading difficulties

Automated Transcription

Creating text versions of spoken content for students with hearing impairments

Real-Time Translation

Supporting multilingual learners with instant language conversion

Features like text-to-speech, automated transcription, and real-time translation make content more accessible for students with special needs or multilingual learners, supporting greater equity and inclusion in education.

Real-time Speech to Text

Assessment Support and Real-Time Feedback

AI provides detailed insights on student performance via analytics, dashboards, and early detection of learning difficulties.

Teachers can use this data to adjust instruction, target interventions, and provide faster, personalized feedback.

Critical Thinking and Digital Literacy

Using AI outputs as learning objects encourages students to question, improve, and validate information critically—an essential part of developing responsible digital citizenship and AI literacy.

Question
Evaluate AI-generated content

Develop
Build digital citizenship skills

Improve
Refine and enhance information

Validate
Verify accuracy and reliability

Summary

AI Benefits

- Personalization
- Engagement
- Autonomy
- Continuous assessment
- Accessibility

Teacher's Role

- Guiding AI use
- Validating content
- Contextualizing tools
- Ensuring ethical integration

"AI is a powerful tool—but it's the teacher who gives it purpose."

French national education initiatives in AI

lalilo

Examples of french platforms:

LALILO: Lalilo is a web-based, research-based literacy program designed primarily for students in kindergarten through second grade (K–2). Its core function is to support foundational reading skills, including phonological awareness, phonics, word work, comprehension, and grammar through engaging, adaptive lessons. Lalilo uses artificial intelligence (AI) to personalize each student's learning path: it analyzes individual progress and automatically adapts exercises to their needs, which helps keep activities challenging but achievable

ADAPTIV'math ADAPTIV'math is an adaptive digital platform designed to support the teaching and learning of mathematics, specifically for primary school students (Cycle 2: CP, CE1, CE2, corresponding to K1–K3 internationally).

- Personalized learning paths: AI analyzes each student and adapts math exercises to individual levels for optimal challenge.
- Research-based content: Activities are grounded in cognitive science and updated for different curricula.
- Real-time feedback: Instant feedback for students; detailed analytics dashboards for teachers.
- Simple interface: User-friendly, distraction-free design.
- Inclusive: Effective for all students, including those struggling.
- Free in France: No-cost access for French primary schools.

MATHIA: MATH IA is an AI-driven mathematics learning software developed by Carnegie Learning, primarily designed to provide personalized instruction for middle and high school students. It uses artificial intelligence to tailor problem sets and learning paths to each student's strengths and weaknesses, ensuring targeted practice and mastery of math concepts.

SMART ENSEIGNO is a free, AI-powered digital platform designed for teaching mathematics to students in CP, CE1, and CE2 (first to third years of French primary school, Cycle 2). Developed as part of the Ministry of Education's AI Innovation Partnership (P2IA), it supports both teachers and students with interactive, adaptive learning resources and smart teaching tools

Thank you for your attention
and your participation

Congratulations!

You are officially a Smart Edu AI now!
